Microwaving the living matter for sensing

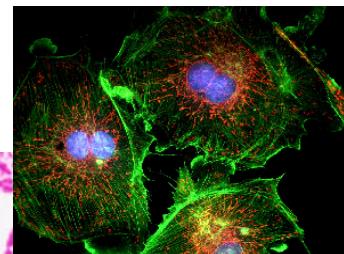

Main motivation

Cells and tissues analysis for biological and biomedical applications

Traditional techniques:

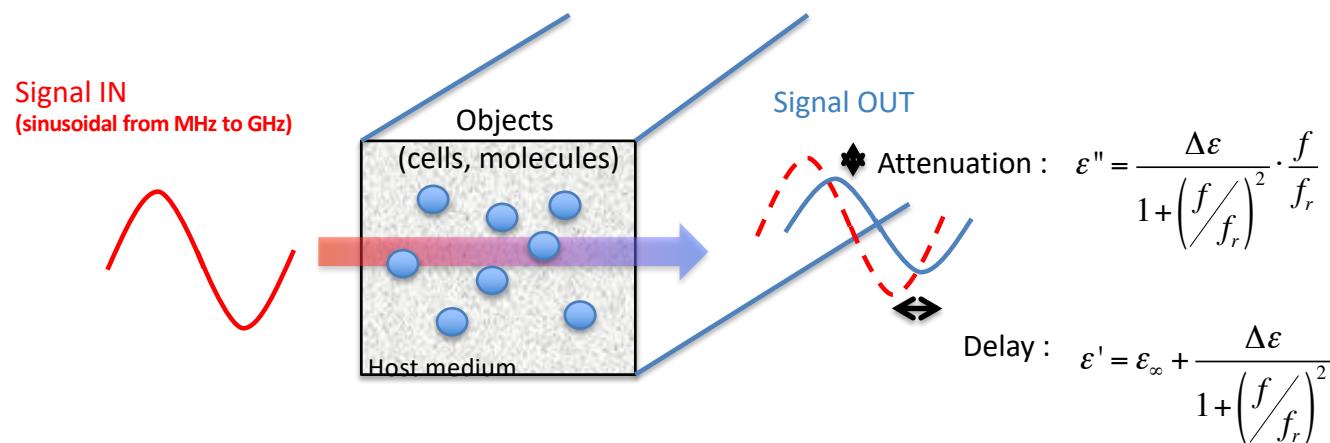

- Microscopy with stains or labels
- Laser detection
- Flow cytometry

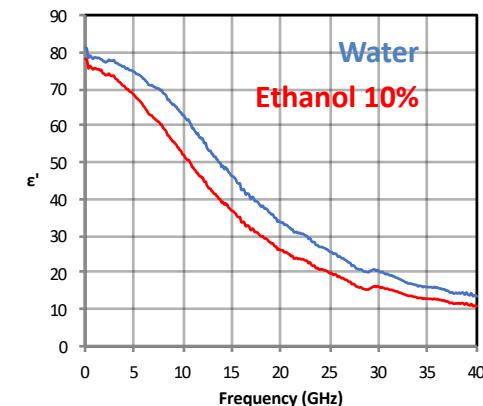

Invasive and toxic for cells
Destructive
Time consuming
Costly

➔ Interest in non invasive and
label-free bio-analysis

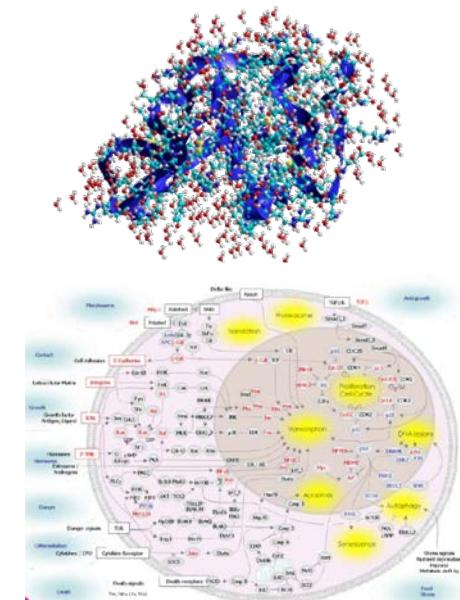

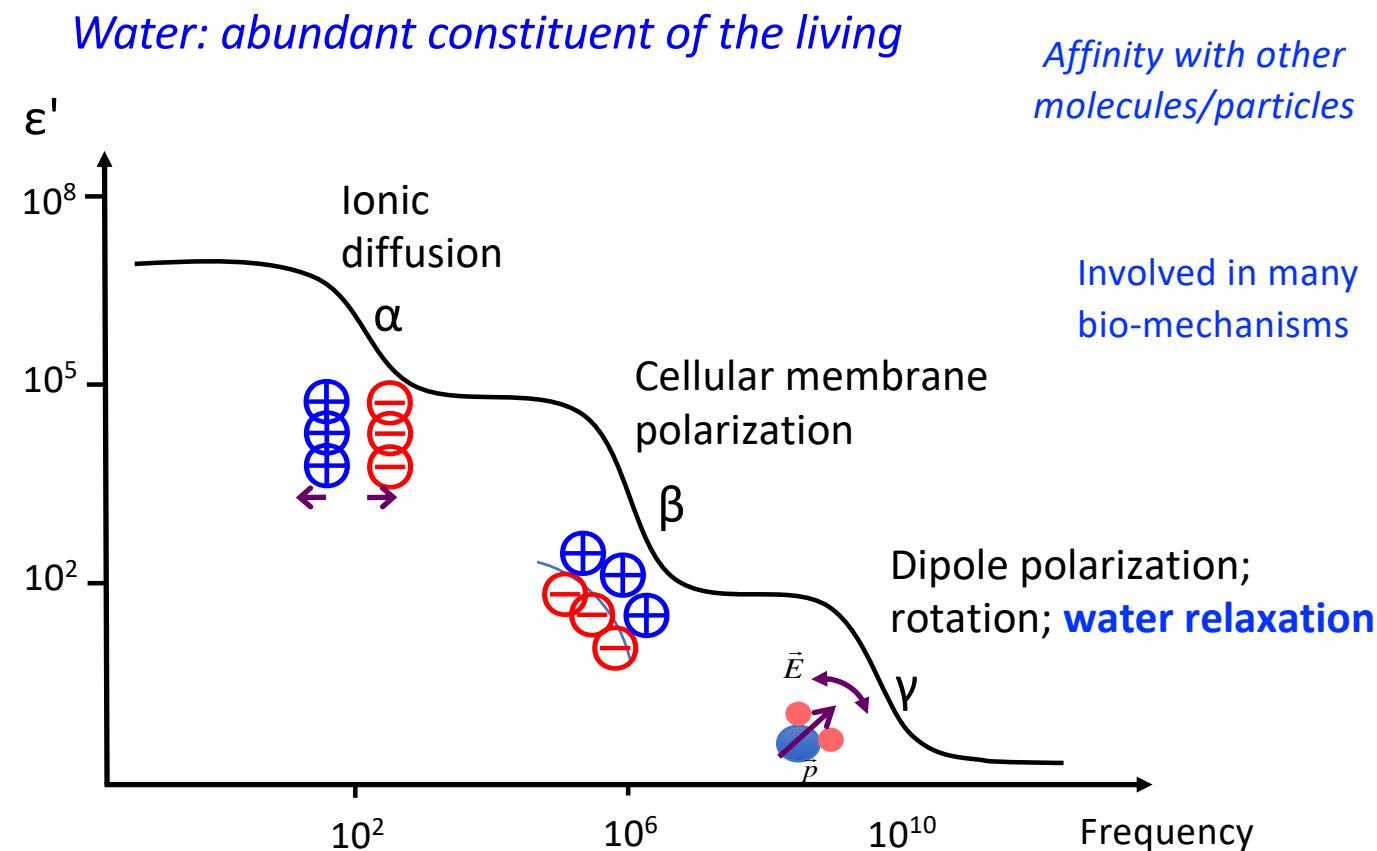

Microwave dielectric spectroscopy readouts

- Both ϵ' and ϵ'' are readouts of
scanning frequency,
dipolar moment,
size of the objects (volume fraction)
viscosity
- Modification of the molecular network structure
→ Change of the microwave dielectric response

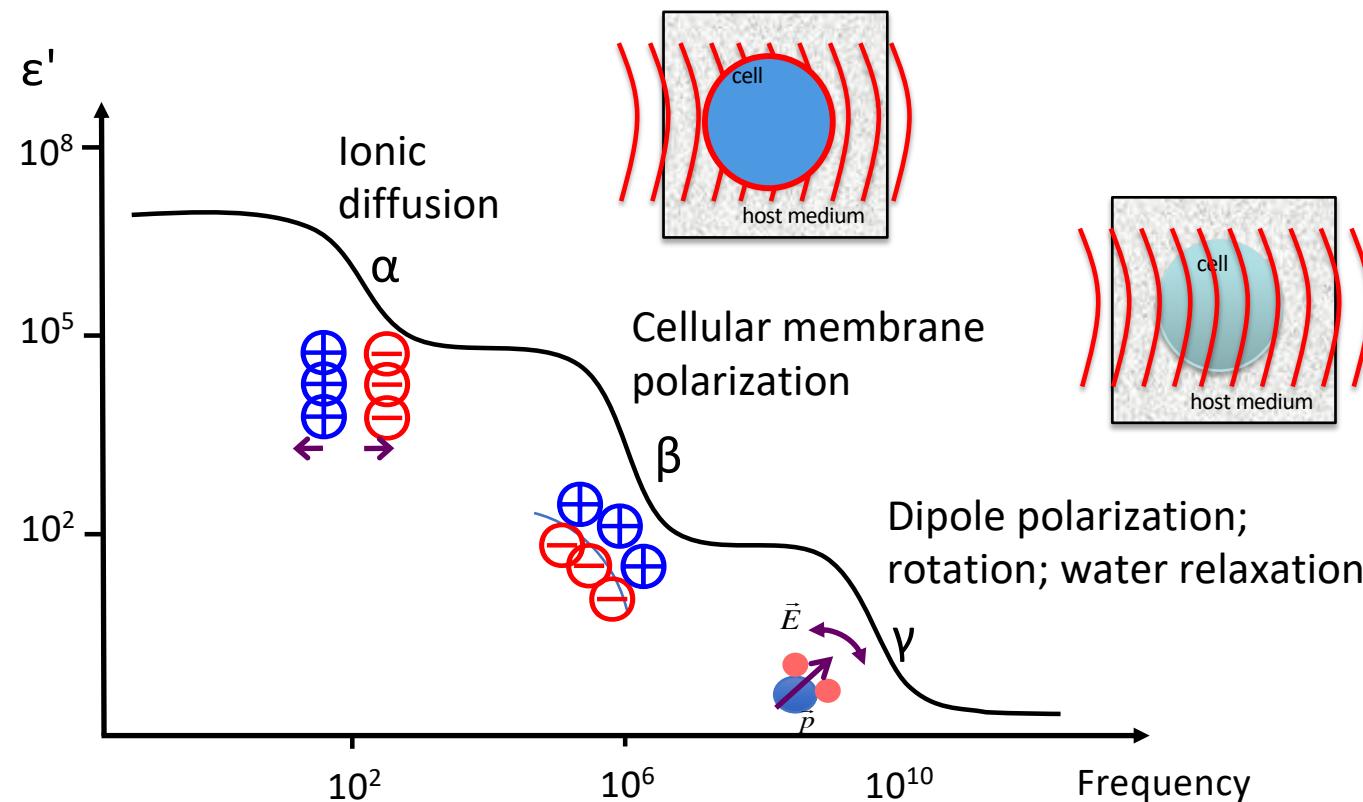

Electromagnetic wave interaction with the living

H. Schwan, 1985

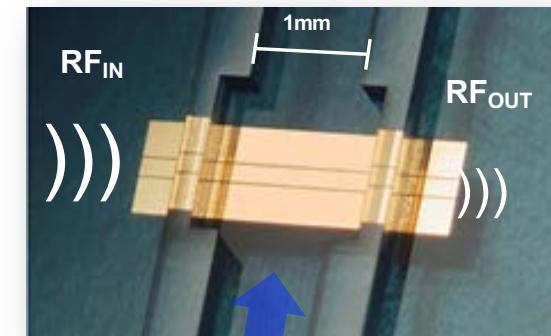

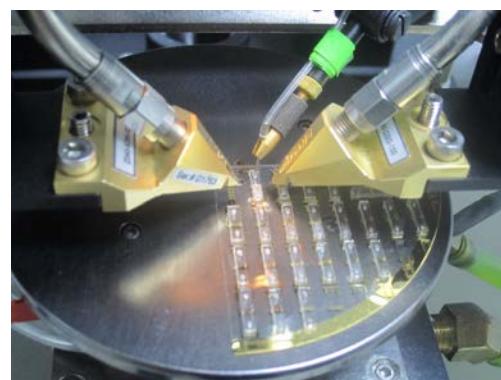

Electromagnetic wave interaction with the living

H. Schwan, 1985

Dielectric characterization of fluids

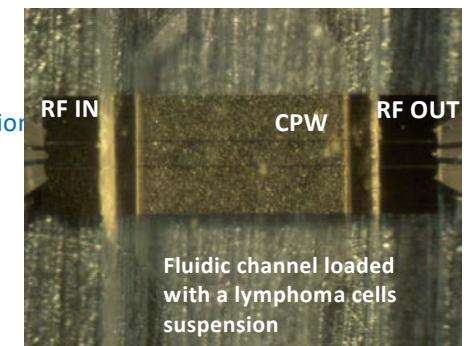

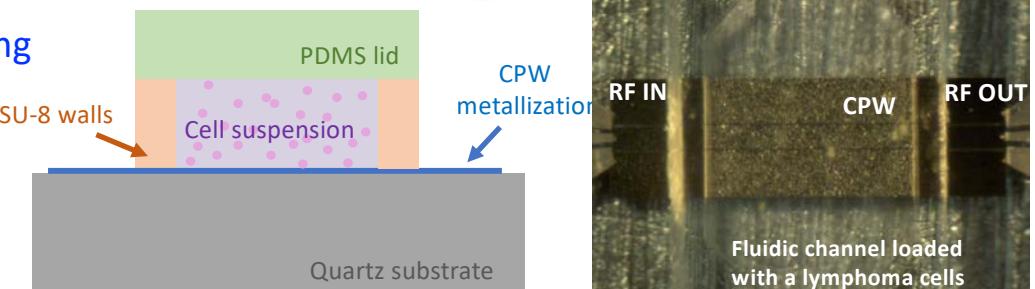

Coplanar waveguide sensor for biomolecules in aqueous solution and cells suspensions analysis

[S] parameters measurements

De-embedding

(ϵ', ϵ'') vs frequency

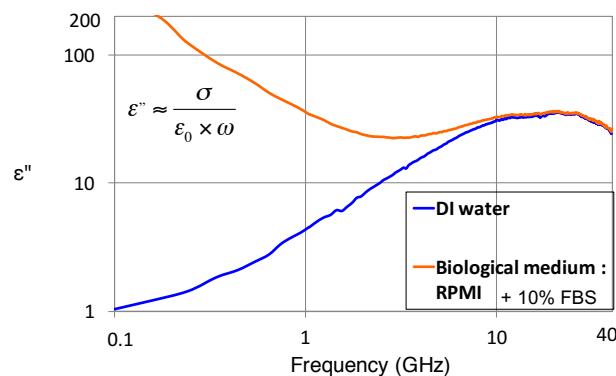

More details in Grenier et al., IEEE T-MTT 2009

Microwave dielectric spectroscopy for cell analysis

Cells analyzed directly
in their culture medium

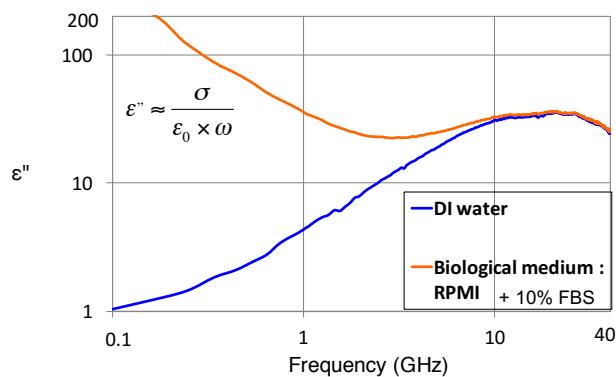

No screening with salt/ion content

Microwave dielectric spectroscopy for cell analysis

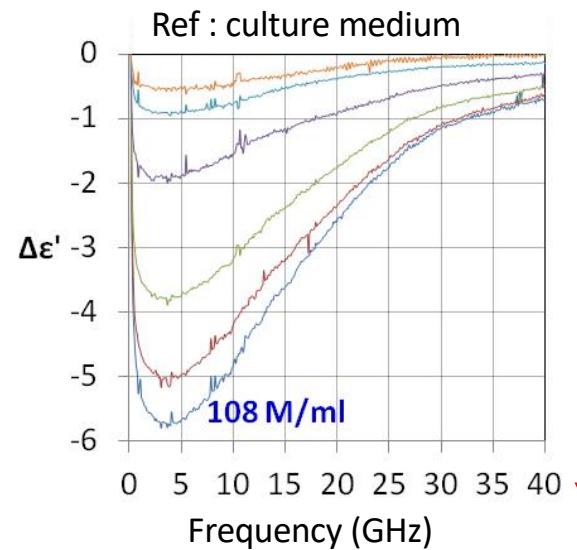

Cells analyzed directly
in their culture medium

No screening with salt/ion content

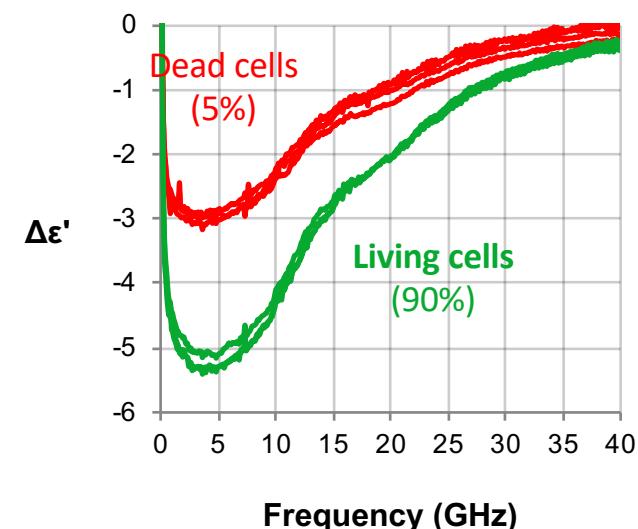

$$\Delta\epsilon = \epsilon_{\text{fluid under test}} - \epsilon_{\text{ref}} \text{ (host medium)}$$

Quantification
of RL lymphoma cells

F. Artis et al., IEEE EuMW 2013
K. Grenier et al., IEEE Biowireless 2011

Dead/living discrimination
Use of saponin on DoHH2 cells

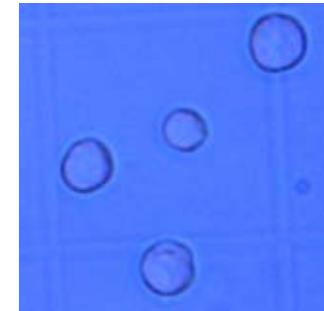

F. Artis et al., IEEE IMS 2014

Label free discrimination of cells

Case study : B lymphoma cell lines

Traditional equipments used for discrimination :

- B lymphoma cells from other lymphoma cells:
→ Recognition with antigenic labelings of CD19⁺ and CD20⁺
- Between B lymphoma cell lines :
→ heavy molecular cytogenetic characterization

Lymphoma cells in culture medium

Cell lines	Concentration (M/ml)	Viability (%)	Diameter (μm)
OCI-LY7	83.7 (11.1)	83.5 (10.5)	10.4
OCI-LY10	82.9 (10.1)	93 (2.9)	10.3
OCI-LY18	79.2 (21.4)	87 (9)	12.2

]

Similar size

Larger diameter

Label free discrimination of cells

Case study : B lymphoma cell lines

Traditional equipments used for discrimination :

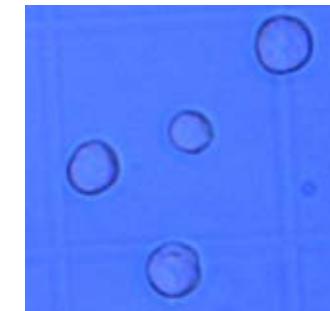

- B lymphoma cells from other lymphoma cells:
→ Recognition with antigenic labelings of CD19⁺ and CD20⁺
- Between B lymphoma cell lines :
→ heavy molecular cytogenetic characterization

Cell lines	Concentration (M/ml)	Viability (%)	Diameter (μm)
OCI-LY7	83.7 (11.1)	83.5 (10.5)	10.4
OCI-LY10	82.9 (10.1)	93 (2.9)	10.3
OCI-LY18	79.2 (21.4)	87 (9)	12.2

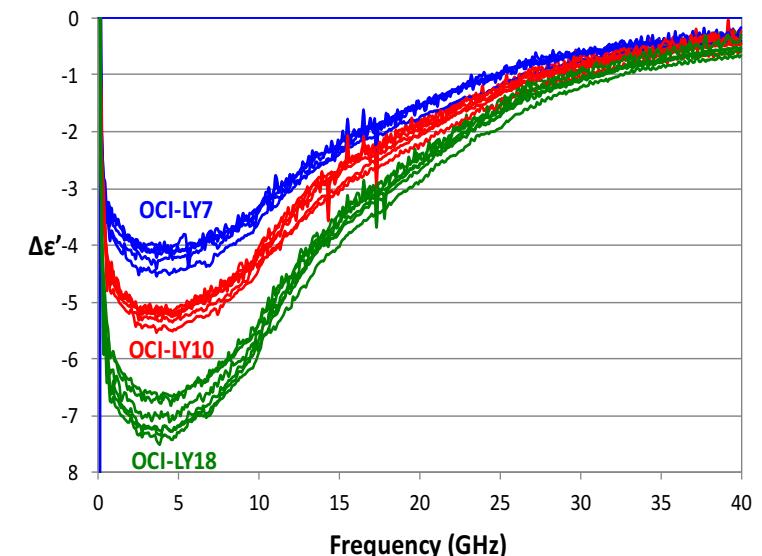

]

Similar size

Larger diameter

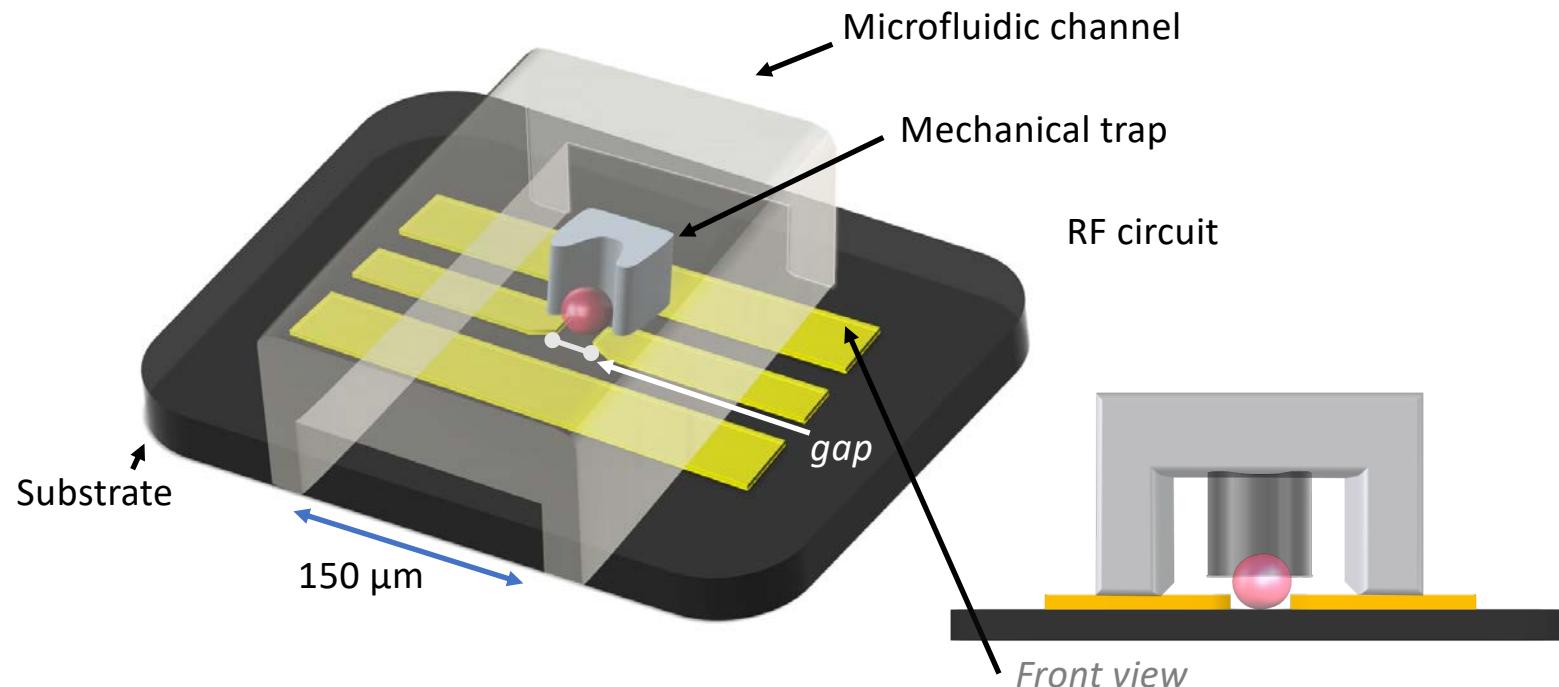

Lymphoma cells in culture medium

→ Possible discrimination of sub-populations of B lymphoma cell lines
(with a common phenotype) due to internal molecular and constitutive variations of the cells

K. Grenier et al., IEEE IMS 2018

Broadband single cell detection

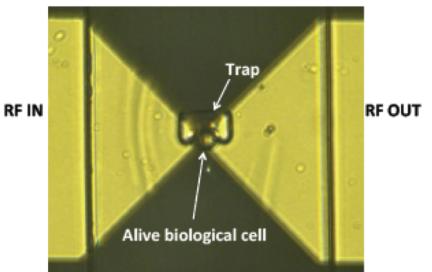

- **Substrate :** quartz
- **Coplanar waveguide:** gold layer of $0.3 \mu\text{m}$ thick, with a capacitive gap
- **Trap and fluidic channel:** polymer based technology

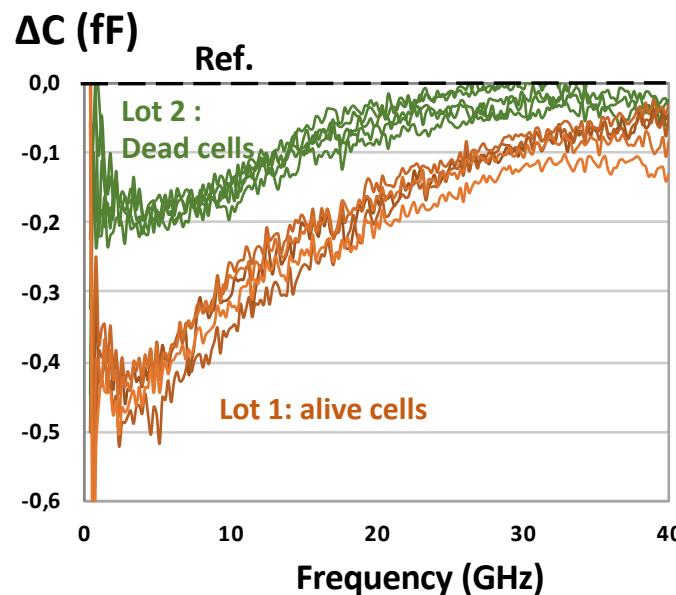

With single cells

Cell state

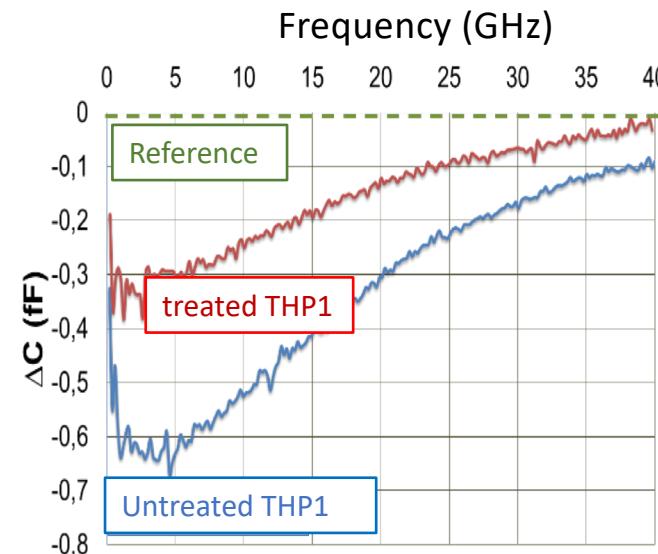

single THP1 cells in culture medium (RPMI+10%FVS)

Death induced by starvation

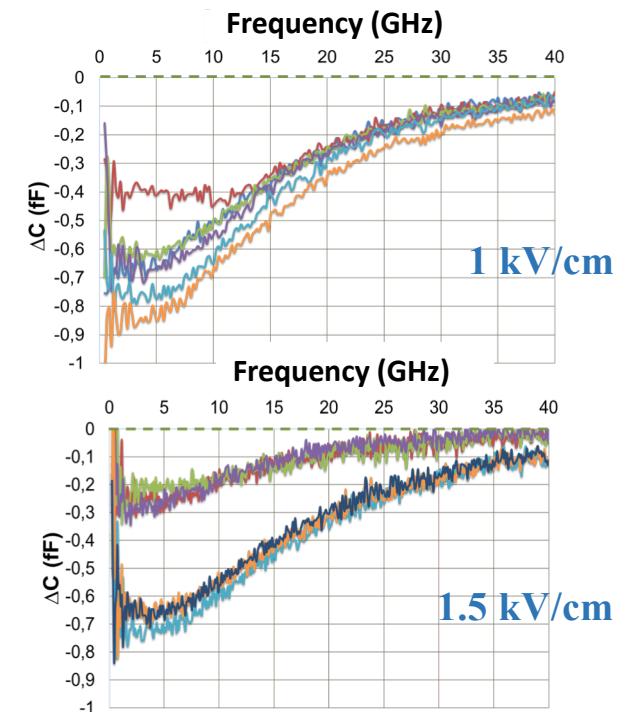

by a chemical agent (saponin)

F. Artis et al., IEEE IMBioC 2019

With electrical fields

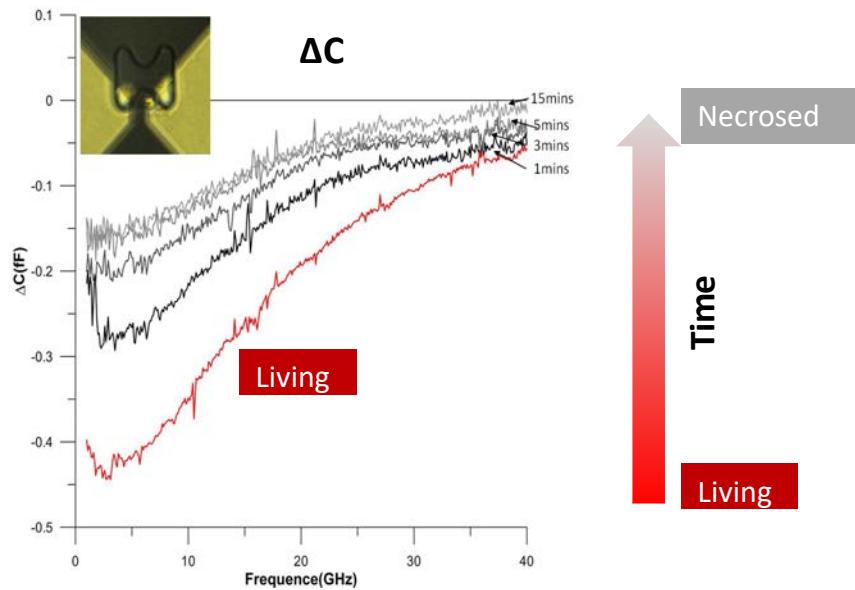

A. Tamra et al., URSI-GASS 2021

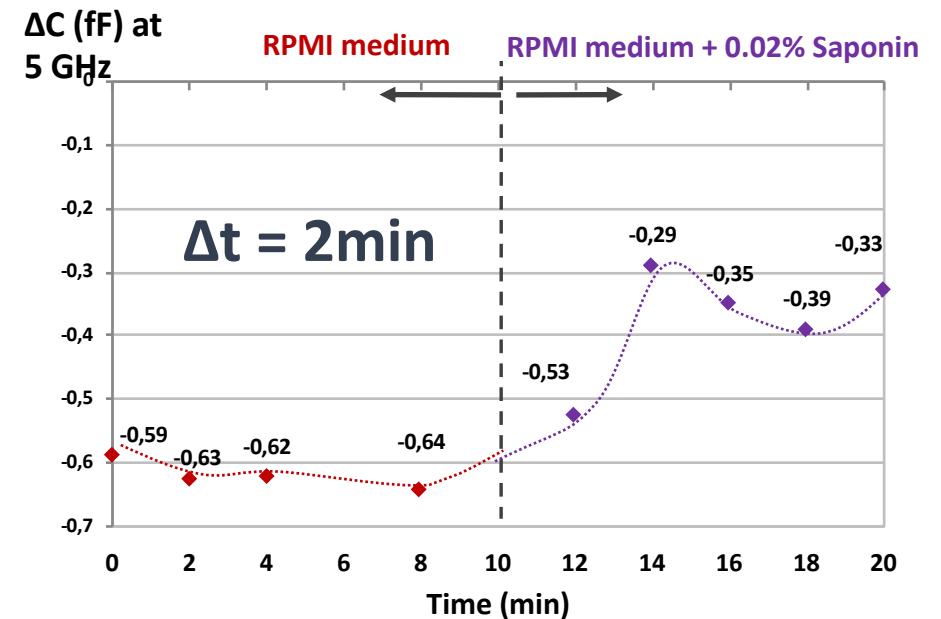

A. Tamra et al., IEEE TBME 2022

Real time monitoring of a cell permeabilization

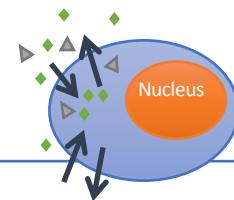

RL lymphoma cell submitted to 2% methanol

THP1 cell submitted to 0.02% of saponin

→ Monitoring of biological process kinetic

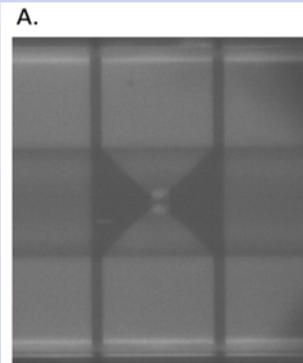

Toward ElectroChemoTherapy monitoring with microwaves

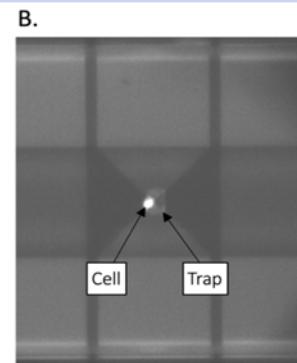

On going work of Anne Calvel

In situ electroporation at the single cell level

Before EP

20 mins after EP : propidium iodide entrance

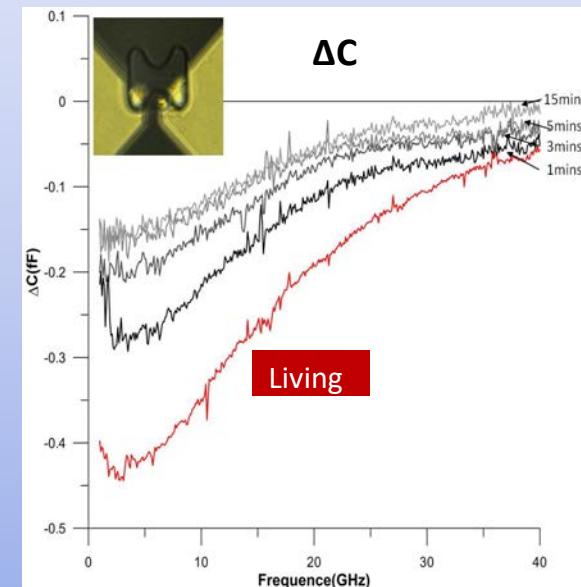

EP : 8 pulses of 5 ms duration at 1 Hz
on PC3-GFP cells

A. Calvel et al. WCT 2022

+

Real time monitoring with microwave spectroscopy

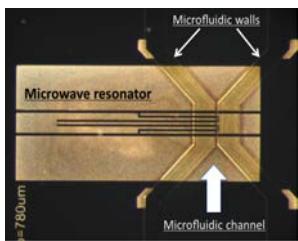

W. Chen et al. URSI GASS 2021

Extension of microwave analysis to microtissues

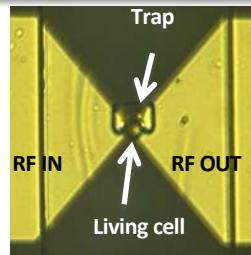

Different sensors and test setups solutions

IN VITRO

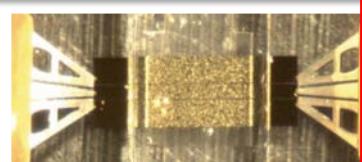

Ions; particles; molecules

Single cell

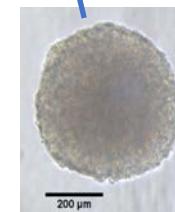

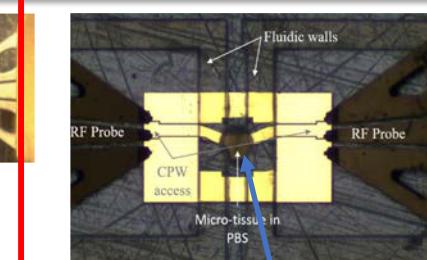

Cells in suspension

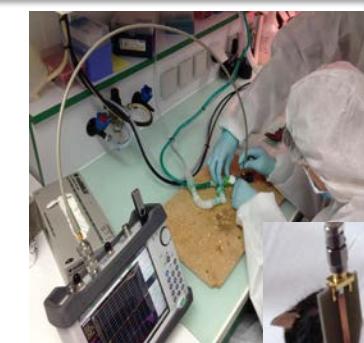

EX VIVO / IN VIVO

Micro-tissues

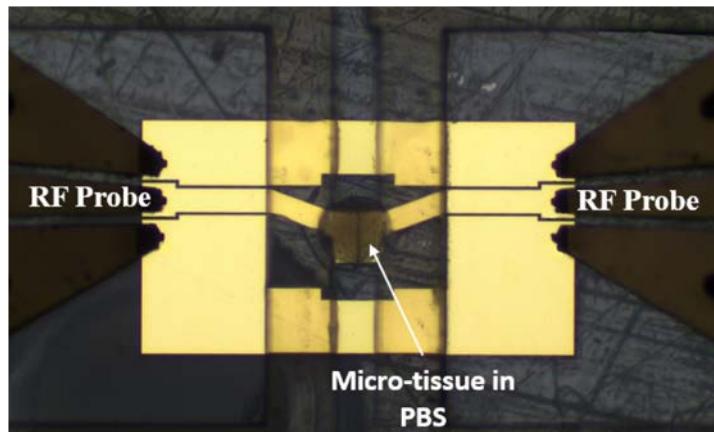

Tissues, organs

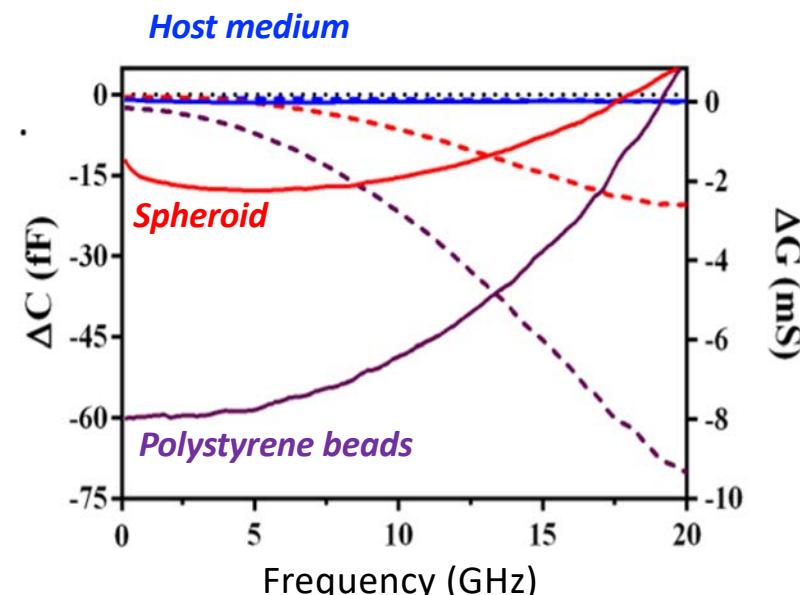

Animals, humans

→ 3D biological model close to the in vivo configuration, avoiding animal experiments

Microwave characterization of microtissues

O. Peytral-Rieu et al, IEEE IMS 2021

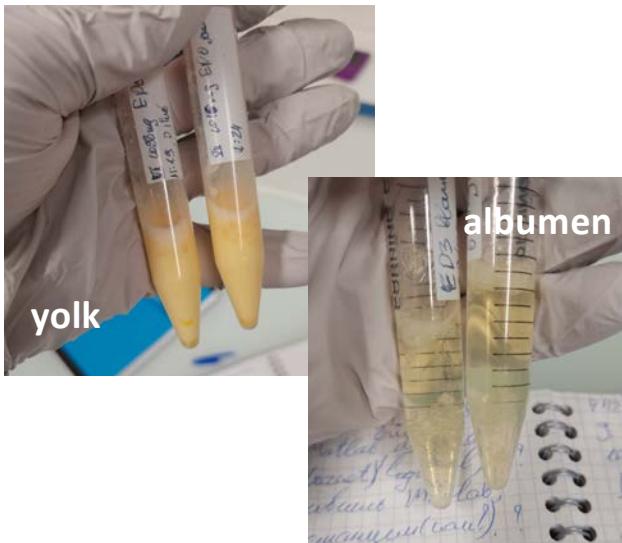

Extended to real time monitoring in O. Peytral-Rieu et al, IEEE T-MTT 2023

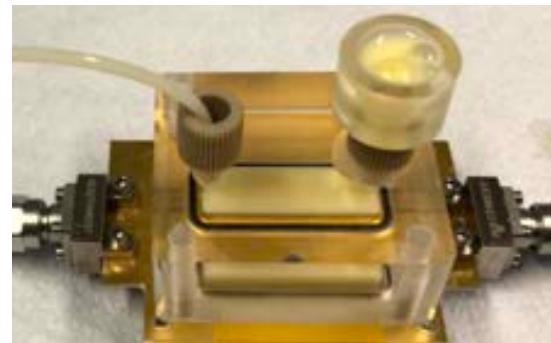

Applied to the study of drug impacts through the work of Yuwei Li

Extension of the sensing technique to agriculture studies

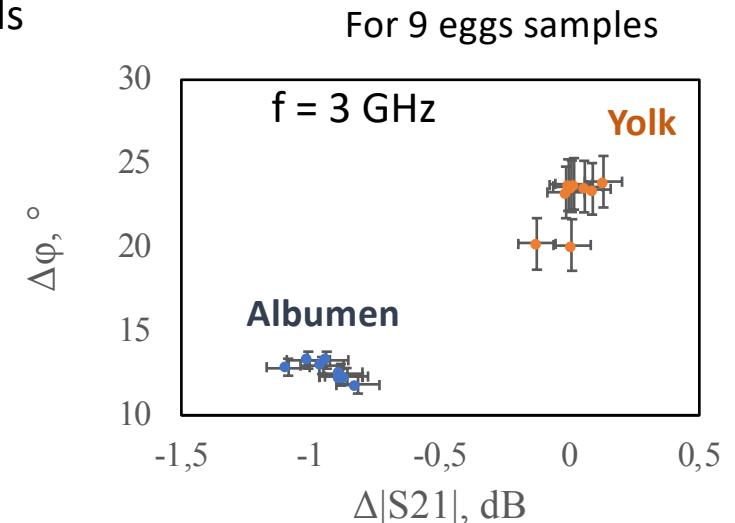

Study of egg constituents for quality assessment

Millifluidic sensor with appropriate RF measurement and cleaning protocols

Fluids particularly sticky, viscous

Y. Kozhemyakin et al., EuMW2022

→ Evaluation of the possible discrimination of early in ovo sexing under investigation

Multi scales // multi sensors // multi purposes

Different sample scales
